FIG. 1

FIG. 2

FIG. 3A

FIG. 3B

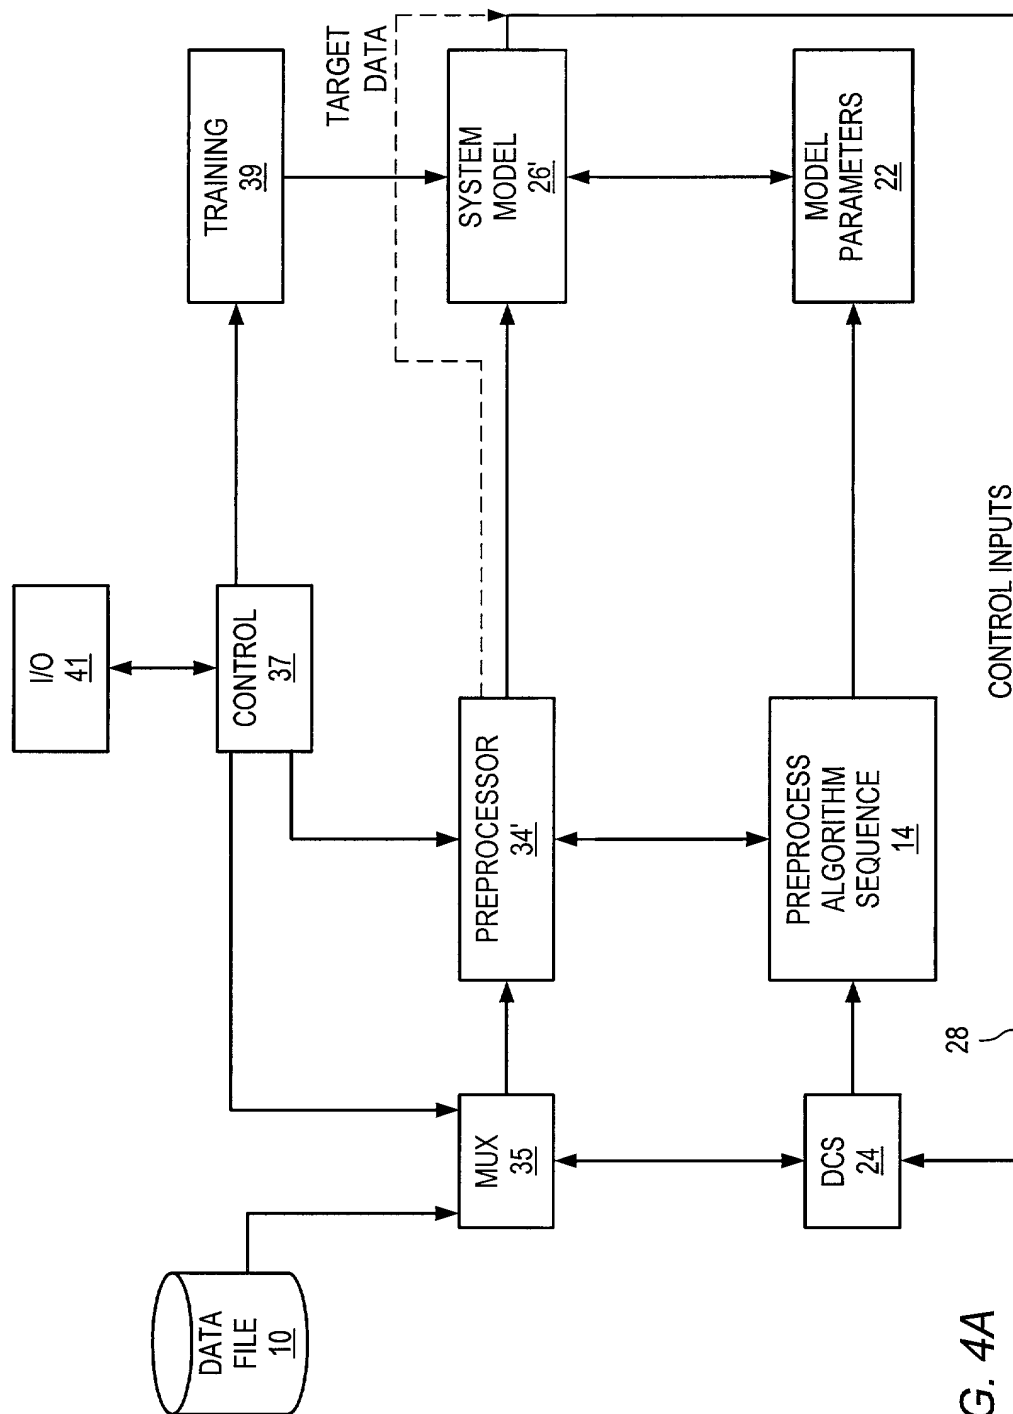

FIG. 4A

FIG. 4B is a block diagram of a system for training a model. The system includes a data file 10, a control unit 37, a training unit 39, a system model 26, a delay unit 36, a delay settings unit 18, a preprocess unit 34, a preprocess algorithm sequence 14, a DCS unit 24, a MUX unit 35, and an I/O unit 41. The data file 10 is connected to the MUX unit 35. The MUX unit 35 is connected to the preprocess unit 34 and the DCS unit 24. The control unit 37 is connected to the training unit 39, the delay unit 36, and the DCS unit 24. The training unit 39 is connected to the system model 26. The system model 26 is connected to the delay unit 36. The delay unit 36 is connected to the delay settings unit 18. The delay settings unit 18 is connected to the preprocess unit 34. The preprocess unit 34 is connected to the preprocess algorithm sequence 14. The preprocess algorithm sequence 14 is connected to the DCS unit 24. The DCS unit 24 is connected to the MUX unit 35. The I/O unit 41 is connected to the control unit 37. A dashed line labeled 'TARGET DATA' connects the training unit 39 to the system model 26. A solid line labeled 'CONTROL INPUTS' connects the DCS unit 24 to the delay settings unit 18.

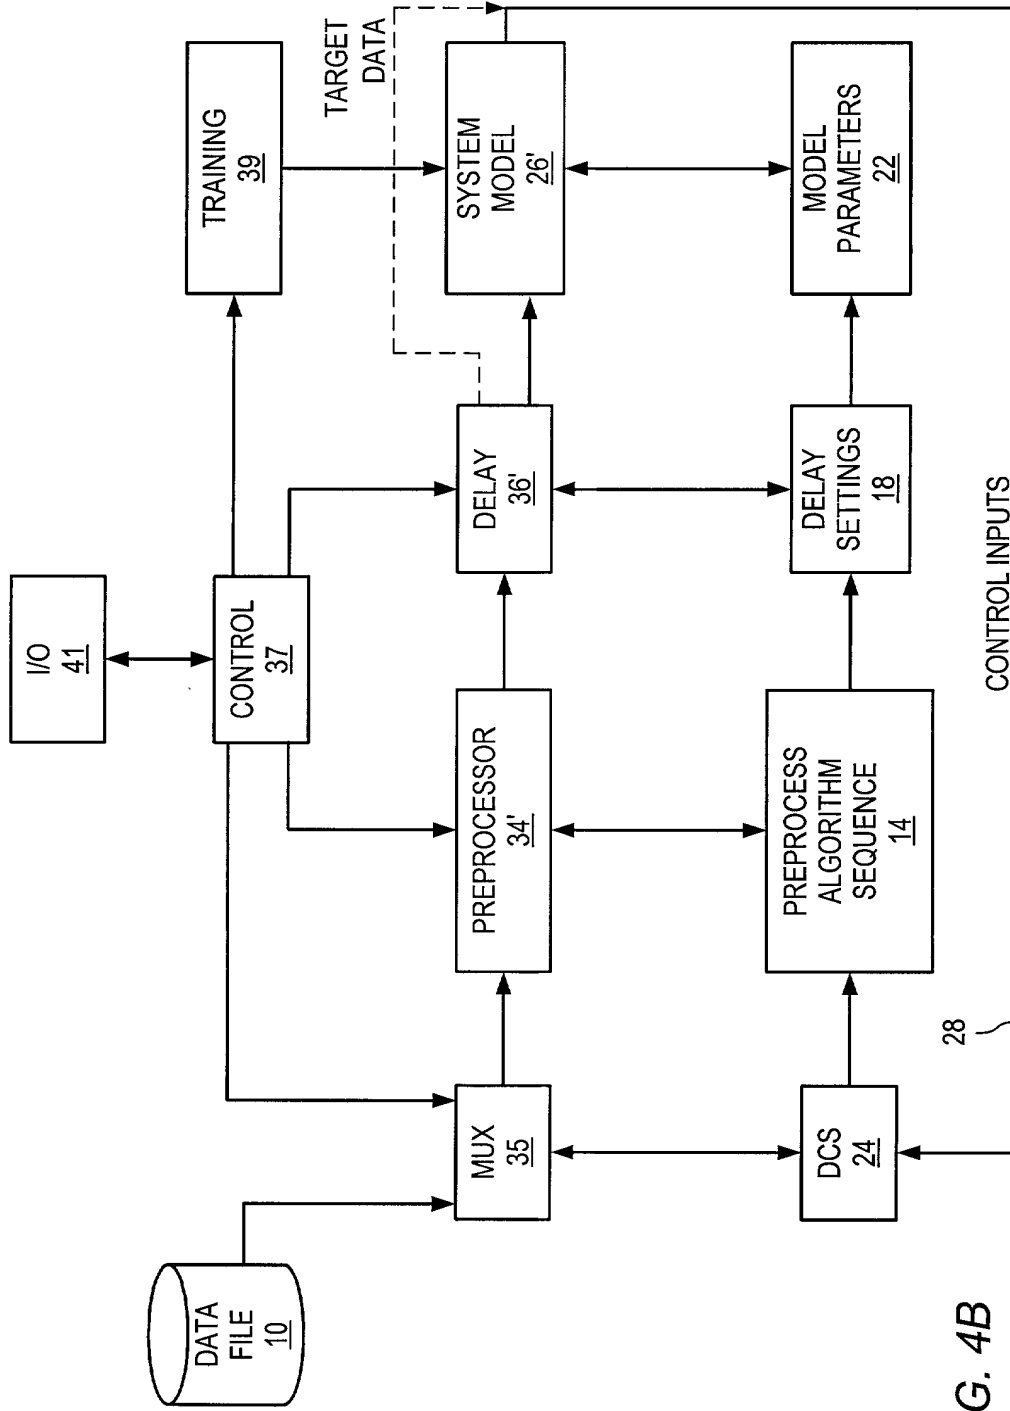

FIG. 4B

FIG. 5

FIG. 6 is a block diagram of a time merge circuit 40. The circuit 40 receives a plurality of input signals $\vec{x}(t)$ and outputs a merged signal $\vec{x}_D(t)$.

FIG. 6

FIG. 7A is a graph of the function $x_1(t)$ versus time t . The function $x_1(t)$ is a periodic wave with a period of 2π . The function $x_1(t)$ is a periodic wave with a period of 2π .

FIG. 7A

FIG. 7B is a schematic diagram of a cross-section of a structure 700, showing a curved surface 710 and a series of vertical arrows 720 indicating a direction of flow or force.
